

quiet pro™

the world's quietest
mechanical keyboard

It feels amazing.

The Quiet Pro uses Matias' new Quiet Click mechanical keyswitches. They deliver a feel that's unmatched for comfort — without sacrificing the tactile feedback you need to type really fast.

It's really quiet.

Mechanical keyboards offer the best performance, but they're noisy — too noisy to use in most offices, or around other people. This is the first one that's quiet. Over two years in the making, it's the only mechanical keyboard that keeps both your fingers and your co-workers happy.

Click to compare.

How quiet is it? The Quiet Pro is no louder than a regular (non-mechanical) keyboard. Your co-workers probably won't even be able to tell that you have one.

To hear the difference, we made sample recordings of the Quiet Pro plus three other mechanical keyboards — our award-winning [Tactile Pro](#), a Cherry Blue switch keyboard, and a Cherry Brown switch keyboard. Simply click (or tap) to play/pause. Adjust your speaker volume (if necessary).

3 extra USB 2.0 ports.

Some keyboards have 2 USB ports — most have none. We're giving you three! You can plug in flash drives, digital cameras, your mouse, and more.

Laser etched keys.

All those symbols are handy, but what happens when they wear off? They won't. They're laser etched — burned into the keys with a laser — so they'll never wear off.

Sculpted keytops.

The latest trend in keyboards is to have very flat & wide keys, with little or no space between them. You see this a lot on laptops

and netbooks. While they look great, they can also be a little tricky to type on. The flatness makes it very easy to slide out of home row and lose your bearings.

The Quiet Pro bucks this trend. It has traditional sculpted keytops, curved to fit your fingertips, and keep you from sliding out of home position.

Audio & media controls.

Dedicated keys let you control Volume Up / Down / Mute. Plus, by holding down the Fn key you gain access to strategically located Pause / Play, Next Track, and Previous Track keys.

Tab key on the number pad.

For users who do a lot of spreadsheet work or accounting entries, we've added a Tab key to the number pad. It streamlines your data entry, and saves you time.

Ghosts busted.

Most keyboards allow only a few keys to be pressed at once, so they can't keep up with very fast typists. The result is called ghosting — letters missing from what you actually typed, or additional letters that you didn't type.

The Quiet Pro has special Anti-Ghosting Circuitry (also called n-key rollover) to eliminate these problems. You can type as fast as you're able; the Quiet Pro will keep up.
